Acrylic Bathtubs - Hydromassage - Airmassage

PYRAMIS combining high technology with style and comfort, transforms luxury into everyday pleasure in the bathroom.

Through a large variety of bathtubs and hydro-air massage systems of great quality in affordable prices, PYRAMIS offers the choice of what best fits in a bathroom and covers daily hygiene needs at the maximum.

Bathtubs' Technical Specifications

PYRAMIS bathtubs are made of pure acrylic material, 4-5mm thick. It is hypoallergic, smooth and warm to touch and features high insulating characteristics, maintaining the water temperature for longer time. In case it is damaged its repair is very easy to perform by using a special shining cream for acrylic material and water sandpaper. PYRAMIS bathtubs also feature a 16mm base which offers extra stability and durability, that is the reason why they have a 25 year guarantee.

Technical Characteristics Hydromassage

The hydromassage systems are available in 3 types, Turbo, Turbo Plus and ECO. They all have 6 double energy jets (50mm or 65mm) with adjustable flow (2 on the back, 2 on the sides and 2 on the feet). The first two hydromassage types can be combined with an airmassage system.

Turbo Hydromassage System

It includes:

- Air supply tube **Ø16mm**
- Water supply tube **Ø32mm**
- **6** adjustable, double energy jets **50mm**
- 1 absorption inlet **Ø50mm** with filter
- 1 pneumatic switch with special system for air regulation
- 1 thermal switch for motor protection
- 1 air-switch **21A-240V** in the motor
- Dynamic water drainage
- Perimetric base

Turbo Plus Hydromassage System

It includes:

- Air supply tube **Ø20mm**
- Water supply tube **Ø32mm**
- **6** adjustable, double energy jets **50mm**
- 1 absorption inlet **Ø50mm** with filter
- 1 pneumatic switch with special system for air regulation
- 1 thermal switch for motor protection
- 1 air-switch **21A-240V** in the motor
- Dynamic water drainage
- Perimetric base

Airmassage System

It includes:

- 1 blower with heater **800W**
- 1 pneumatic switch
- 1 thermal switch for motor protection
- **10** micro air-jets
- 1 kit of pneumatic switch **21A-240V**

Common Characteristics for Hydromassage Systems

- Motor Power **1HP**
- Voltage **230V-50Hz**
- Pump Flow **21,5m³/h**
- Pump Pressure SPA **13,5m**
- Water Flow Capacity **400lt/min**

ECO Hydromassage System

It includes:

- Motor power: **1HP**
- Voltage: **230V-50Hz**
- Water pump flow: **307lt/min**
- Pump pressure: **12m**
- Technical Characteristics:
- Air supply tube **Ø10mm**
- Water supply tube **Ø32mm**
- **6** adjustable, double energy jets **65mm**
- 1 suction inlet **Ø85mm**
- 1 pneumatic switch On/Off
- 1 air regulator
- 1 thermal switch for motor protection
- 1 air-switch **21A-240V** in the motor
- Dynamic water drainage
- 1 anti-shock pump metal base
- Dynamic water drainage
- Network of PVC piping for air & water

Hydromassage Construction

Metallic support system

Every hydromassage has an all-around metallic support system for easier and safer installation. The piping system (made of pool rubber) offers full water drainage through natural flow.

High pressure motor pump

PYRAMIS hydromassage systems are equipped with a pump of high water pressure (motor 1 HP, water flow pump 400lt/min) which is used in SPAs and it has a good function guarantee even for salt water.

Automatic disinfection system with Ozon

PYRAMIS hydromassage systems can facilitate an automatic disinfection system which supplies the ozon through the air circulation of the hydromassage.

elegancia

BATHROOM

Elegancia bathtubs are a centerpiece in the bathroom. With their robust forms and classy design, they bring harmony and elegance to the needs of daily hygiene.

Enjoy one of the four models of the series in different sizes, alone or in combination with a hydromassage and airmassage system Turbo or Turbo Plus.

All four Elegancia bathtubs are heavy duty bathtubs with very thick acrylic material. They feature a double coat of polyester, a cover of grey resin and a base that reaches up to 16mm thickness. Therefore, Elegancia bathtubs respond to the most demanding requirements for:

- **Robust resilience**
- **Total rigidity**
- **Timeless durability**
- **Increased heat insulation**
- **Decreased noise level**

Sanitary Ware

PYRAMIS bathroom range includes five integrated lines of sanitary ware along with several individual pieces of WCs and washbasins. They are designed with respect to the contemporary needs of the everyday care offering the ideal solution for a stylish and functional bathroom. **PYRAMIS** porcelain sanitary ware is produced in a technologically advanced production unit

with specialized know-how and according to the highest standards. They are subjected to constant quality controls and they are certified by international organizations. This is the reason why the **PYRAMIS** sanitary ware is accompanied with **10 year guarantee** and 1 year for the auxiliary parts.

Advanced technical characteristics

PYRAMIS sanitary ware is manufactured with the most advanced methods. Therefore they ensure the highest quality and endurance standards.

- Water absorbancy < 0,5%
- Acid resistance
- Hot water resistance
- Stain resistance
- Abrasion and thermal shock resistance
- Bend resistance (M.O.P. = 500 kgr/cm²)
- Percussion resistance (1,3 kgr/cm²)

Back to Wall WCs

High aesthetic WCs with advanced design are placed with their back attached to the wall, covering completely the plumbing installation.

Universal WCs

All PYRAMIS models can be adjusted for P-trap or S-trap installation with a proper adaptor.

Wall hung WCs

They represent the ideal choice for domestic or professional use, saving a lot of space in the bathroom..

Soft close Seat & Covers

They have a specially designed mechanism for controlled closing and also they are supplied with metallic hinges for longer endurance.

Washbasins

Classic with normal or semi-pedestals, counter-top or under-counter, they fit in all bathrooms covering every need.

Mechanism 3/6 lt for cistern

Offers the choice of using the full tank water or the half tank water of the cistern.

DEKELIA

Dekelia includes a WC and a washbasin with exquisite square design that makes every bathroom unique. Their clean forms tone in the daily hygiene making it easier and more pleasant. Dekelia sanitary ware by Pyramis offers a high aesthetics proposal for bathrooms with style.

DEKELIA

*Dekelia includes a WC and a washbasin with exquisite square design that makes every bathroom unique. Their clean forms tone in the daily hygiene making it easier and more pleasant. Dekelia sanitary ware by **PYRAMIS** offers a high aesthetics proposal for bathrooms with style.*

ERETRIA

*Eretria represents an exclusive choice for those who seek the ultimate design and efficiency in their bathroom. The curvy lines, the contemporary aesthetics and the high quality of materials, offer the perfect combination for every day personal care. The Eretria line of sanitary ware by **PYRAMIS**, includes two WCs and two washbasins of different sizes and forms in order to cover the individual needs.*

BATHROOM TAPS

The new distinctive range of **PYRAMIS** bathroom taps features exceptional design attributes and each model is made using the highest quality production standards. Available in classic or modern styles to suit all preferences, each tap can be perfectly combined with **PYRAMIS** stainless steel or porcelain washbasins or bathtubs. All **PYRAMIS** taps are covered by a five year guarantee.

Pop Up Valve

All basin models have a pop up valve that seals and opens the outflow with one effortless movement.

Level Water Flow

In selected models, there are two predetermined water flows (high-low) that ensure the optimum efficiency of water quantity and temperature.

Features and Properties

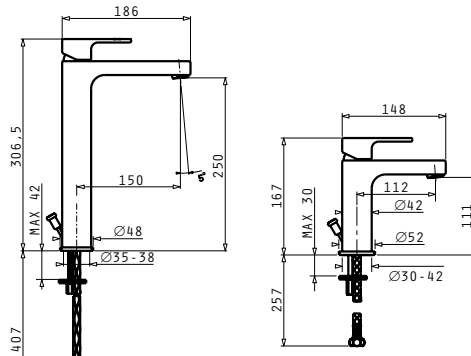

All PYRAMIS bathroom taps are manufactured according to ISO 9001:2000.

Dynamic Pressure Conditions

All taps are suitable for dynamic water pressure min= 0.5 bar to max= 5.0 bar.

SOLAR SYSTEMS

***PYRAMIS** solar water heaters combine the most advanced collectors -simple or selective- with the latest developed boiler-tank, maximizing the performance even of the weakest sunshine.*

*The **PYRAMIS** boiler-tank is designed according to the highest quality standards and ensures the maximum effectiveness and performance.*

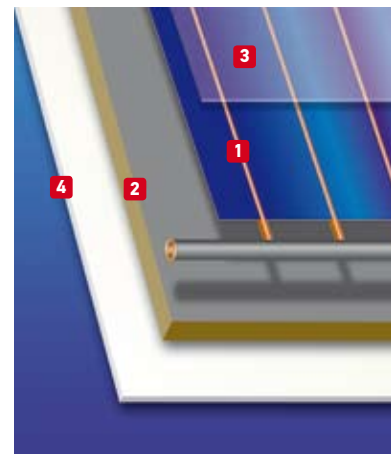

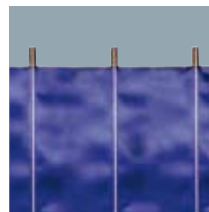

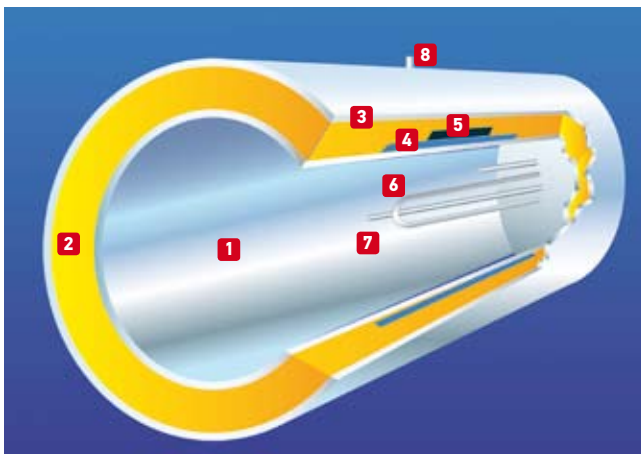

*The absorber: is a **one piece** copper sheet with: **a.** Simple black coating achieving **65%** sun absorbency **b.** Blue colored (any other color is not 100% selective) **Blue Tech** selective coating achieving **95%** sun absorbency. This coating ensures 16% higher energy performance during winter and fall which leads to 10% more yearly average energy performance than the simple collectors.*

Water Tank

1. Water tank made of steel foil (DCP) 2,5mm thick. It has ONE horizontal welding instead of three which is most often the case by competition. The welding endurance is tested under a pressure of 15 bars. The inner protection of the tank is done with smalt-coating of double vitrification, in 860oC.
2. Insulation with cast ecological polyurethane, with 40kg/m² density and 60mm thickness. It covers uniformly the tank, ensuring the preservations of the water temperature, for longer time.
3. External casing from non ferrous stainless steel material (304) 0,5mm thick, for longer time and weather endurance.
4. Closed circuit double jacket made of steel foil 1,5mm that helps the circulation of the thermal liquid achieving the best heat convection..
5. Inner dilation receptacle on the upper side of the jacket which prevents the detonation of the thermal liquid and therefore its deficiency.
6. Electrical resistance 4KW with bipolar safety thermostat.
7. Magnesium rod, Ø22mm and length 350mm, that can be replaced, for protections against electrolysis.
8. Vent for filling the closed circuit with safety valve of 2 bars.
9. Water supply safety valve (10 bars).
10. Different options of triple energy tanks with large surface durosalt heat commutator (G3/4") to be connected with the central heating system.

Collector

1. **The absorbers tubes:** are copper pipes of Ø10 & Ø22 that are welded to the absorber sheet by the advanced method of ultrasounds "Ultrasonic". This method, compared to the laser welding, is proven to be the most effective one as it ensures safe and long lasting welding for a life-time.
2. **The insulation:** is with rock wool of low conductance 40mm thick, covered with black fibreglass for better thermal efficiency.
3. **The glass-panel:** is unbreakable (Mistlite Tempered-Security Low Iron Glass), 4mm thick, with low iron conciseness for better sun penetrability τ=92%. It is totally transparent so that the high quality of the inner solar system can be easily visible.
4. **The back:** is a mixture of galvanized sheet and aluminum 0,5mm thick.
5. **The outer frame:** is a thermal break profile aluminum for better heat insulation and time resistance of the collector.
6. **The thermal liquid:** is a special antifreeze liquid (propyle glykol) that shields the system from the environmental freezing or overheating temperatures, calc and oxidation preserving the excellent performance of the solar system.
7. **The base:** specially hot galvanized installation basis for flat surfaces or tile roofs, all kind of weather resistant.

WATERHEATERS BOILERS

PYRAMIS water heaters and boilers are produced with the latest technological advancements, under the strictest safety standards. They offer a cost effective choice with maximum performance so that you can enjoy, problem free, hot water in the bathroom and the kitchen.

PRODUCT DESCRIPTION

1. External Casing from steel foil **0,7mm** thick, electrostatic painted at **200°C** (except for the 10lt water heater).

2. Boiler made of steel foil 2,5mm thick, especially deep drawn, which endurance is tested at 15 bars. The water tank has one horizontal welding which offers:

- Great resistance in corrosion
- Great mechanical endurance
- Unlimited life time
- Less weldings ensure better and more unified vitrification

3. Good insulation with **ecological polyurethane 40 kg/m³** dense and **25mm** thick, that preserves the hot temperature for a longer time.

4. Electric Resistance 4kw with safety thermostat, easy to replace.

5. Magnesium Rod for total protection against electrolysis.

6. Thermometer

7. Double Vitrification

Internal protection of the boiler with double enameled coating. The smalt is applied on the metal surface and by heat at **860°C** where a conjunctional coating of smalt and metal is created. Thus, the concrete structure and elasticity of the metal is combined with the hardness and the chemical resistance of the glass. As a result, the boiler is totally protected from rust as the water never contacts the metal surface and remains always clean. Also it includes a safety valve of **10Bar**.

8. Double energy water heaters – boilers (except for the 10lt heater) they function with a smalted spiral inverter which ensures faster heat transmission and higher protection against corrosion..

Quality control occurs on every product separately and not randomly
